

Documentation

1. Main Components

- **App:** Contains all router setups.
- **Todo Components:** Implement add,delete,edit,view tasks functions. Use browser localStorage to store tasks.
- **Login:** Manage user login and validates credentials.
- **Signup:** Manage user registrations and store data in local storage. Add validation to accept only a password with a minimum length of 6 characters.
- **PrivateRoute:** Protect routes that require authentications.
- **AuthContext:** Manage authentications using global state

2. Navigations

- Use useNavigate from react-router-dom for navigate page to page

3. Styles: Use Tailwind CSS

- Tailwind CSS speeds up development by offering utility classes for styling directly in your HTML, making it easy to create consistent, responsive designs quickly and efficiently.

4. Instructions for use:

- In the project directory, you can run: ``npm run dev``

Refer the following link to access the project through GitHub:
